

Guide to the California State Forest Action Plan 2020 Update

Four documents comprise California's State Forest Action Plan 2020 Update, a required report to the USDA Forest Service submitted on a ten-year cycle. This Federal mandate overlaps with the State mandate for CAL FIRE to periodically prepare an assessment of the state's forests and rangelands.

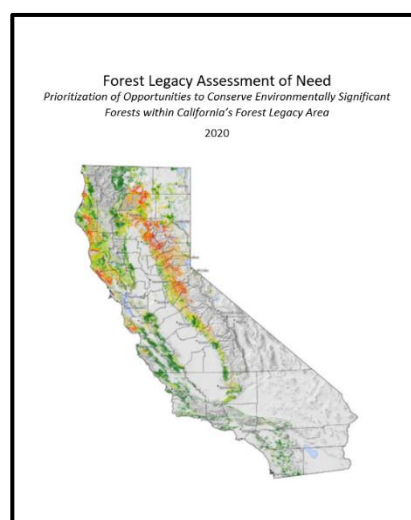

California's Forests and Rangelands 2017 Assessment satisfies most of the Forest Service requirements for the Statewide Forest Resource Assessment component of the State Forest Action Plan.

California's Forests and Rangelands Strategy Report 2020 Update satisfies the Forest Service requirements for the Statewide Forest Resource Strategy component of the State Forest Action Plan.

This Addendum addresses Forest Service requirements for the State Forest Action Plan that are not covered by the other three documents, including Connecting People with Trees, multi-state areas that are a priority, and Priority Regions Identification at a general level.

The Forest Legacy Program (FLP) updated *Assessment of Need* rounds out the State Forest Action Plan. The federal FLP requires the state to evaluate current forests, forest uses, and the trends and forces causing conversion of environmentally significant forests to non-forest uses.
